FRIENDS'
ALMANAC

FOR THE YEAR

1869:

CONTAINING

An account of the times and places of holding the Meetings of Friends on the Continent of America.

Astronomical Calculations for the 40th degree of N. Latitude, and adapted to the Meridians of

New York, Philadelphia, Baltimore, and Cincinnati.

TO BE CONTINUED ANNUALLY.

PHILADELPHIA:
FRIENDS' PUBLICATION ASSOCIATION.

SOLD BY

T. ELLWOOD CHAPMAN, No. 3 South Fifth st., Phila.
JOHN W. CLOTHIER, No. 107 North Fifth st., Phila.
ELI M. LAMB, Baltimore, Maryland.
JOHN J. CORNELL, Menden, New York.
PHŒBE GRIFFITH, West Chester, Pa.
BENJAMIN STRATTAN & SON, Richmond, Indiana.
GEORGE O. FRITTS, Macedon, New York.
ABEL T. WRIGHT, Benderville, Pennsylvania.
SAMUEL S. TOMLINSON, Mount Pleasant, Ohio.
LEVI K. BROWN, Goshen, Lancaster County, Penna.

This Almanac has been transferred by the former publisher, T. ELLWOOD CHAPMAN, to this Association. The calculations for the present year have been made by Dr. Jos. Foulke, Buckingham, Penna. It is desirable that a "*Friends'* Almanac" may continue to be published under the supervision of Friends adopted to the wants of the Society. It is hoped that its circulation will be increased, and thus the Association may be enabled to enlarge and improve it.

FRIENDS' BOOKS

FOR SALE AT

No. 3 South Fifth Street, (up stairs,) Phila.

Conversation on Religious Snbjects, by S. M. Janney,	75
Grandmother's Stories for her Grand Children, by S. M.,	10 & 18

Friends' Family Almanac,	10
Friends' Pocket Almanac,	10

Marriage Certificates by Friends' Ceremony, also filled up in the neatest manner.

OTHER BOOKS FURNISHED TO ORDER.

NOTES TO THE READER.

I. The astronomical calculations in this work, are made to true clock time. The effects of Refraction, according to the latest improved Tables of Bessel, and the Equation of Time, have both been applied to the times of the Sun's rising and setting: so that the Almanac, and a good Clock, will agree the year round.

II. A Time-piece may be set very nearly true by the rising, setting, or southing of the Sun, Moon, or Stars,—but more accurately by the Sun, (or the southing of the Sun, or a fixed Star) any where on or near the 40th degree of north latitude.

III. The time of the rising, setting, or southing of a fixed Star, may be carried several days forward by subtracting, or backward by adding 4 minutes per day.

IV. The common day of 24 hours, begins at midnight, and morning (marked morn.) continues from midnight till noon; and afternoon (marked aft.) continues from noon till midnight; this should be remembered carefully when looking for the times of the rising, setting, or southing of the Moon or Stars soon after midnight.

ECLIPSES.

In the year 1869 there will be two Eclipses of the Sun, and two of the Moon.

I. A Partial Eclipse of the Moon, on the 27th of First Month, in the evening, visible as follows:

	BEGINNING.		MIDDLE.		END.	
	H.	M.	H.	M.	H.	M.
BOSTON	7	45	8	54	10	3
NEW YORK	7	33	8	42	9	51
PHILADELPHIA	7	28	8	37	9	46
BALTIMORE	7	22	8	31	9	40
CINCINNATI	6	51	8	0	9	9

Digits Eclipsed 5.4 from the southern side of the Earth's shadow.

II. An Annular Eclipse of the Sun, on the 11th of Second Month, invisible in North America. The track of central and annular Eclipse passes south of Cape Horn, runs north-eastwardly through the South Atlantic Ocean to Cape of Good Hope, and ends a short distance east of the Island of Madagascar.

III. A Partial Eclipse of the Moon, on the 23d of Seventh Month, beginning in the morning after sun-rise, consequently invisible.

IV. A Total Eclipse of the Sun, on the 7th of Eighth Month, in the afternoon, visible as follows:

	Beginning.		Greatest Obscuration.		End.		Digits Eclipsed.
	H.	M.	H.	M.	H.	M.	
BOSTON	5	21	6	17	7	7	10.4
PHILADELPHIA	5	6	5	55	6	51	11.7
CINCINNATI	4	23	5	24	6	21	11.9

This Eclipse will be visible throughout the United States. The line of Central and Total Eclipse, begins near Shilka, in Siberia, latitude 52° 42′ N.; longitude 117° 31′ E.; passes north-eastwardly through Siberia and Kamtschatka and enters North America a little south of Behring's Strait; then south-eastwardly through Alaska, Montana, Dakota, Iowa, near Iowa City; Springfield, Ill., Louisville, Ky., Salisbury and Fayetteville, North Carolina; and ends in the Atlantic Ocean, about 200 miles west of the Bermuda Islands, latitude 31° 21′ N., longitude 67° 25′ west. This will be the last Total Eclipse of

the Sun visible in the United States during the present century. On the 29th of Ninth Month, 1875, there will be an Annular Eclipse of the Sun, visible in the Eastern States; and on the 28th of Fifth Month, 1900, there will be a Total Eclipse of the Sun, visible in the Southern States.

EXPLANATION OF ASTRONOMICAL CHARACTERS.

THE PLANETS AND THEIR RELATIONS.

☉ or ⊙ The Sun	♀ Venus	♃ Jupiter
☽ The Moon	♁ The Earth	♄ Saturn
☿ Mercury	♂ Mars	♅ Uranus

☊ A Planet's ascending node. ☋ The descending node.
☌ Conjunction, or Planets situated in the same longitude.
□ Quadrature, or Planets situated in longitudes differing three signs from each other.
☍ Opposition, or Planets situated in opposite longitudes, or differing six signs from each other.

In 1733, Benjamin Franklin published in the City of Philadelphia, the first number of his Almanac, under the fictitious name of Richard Laundus. It was commonly called *Poor Richard's Almanac*, and was continued by Franklin about twenty-five years. It contained the usual Astronomical information, "besides many pleasant and witty verses, jests and sayings." The little spaces that occured between the remarkable days of the Calender, he filled with proverbial sentences, inculcating industry and frugality. In 1757, he made a selection from these proverbial sentences which he formed into a connected discourse, and prefixed to the Almanac, as the address of a prudent old man, to the people attending an auction. This discourse was afterward published as a small tract, under the title of "*The way to Wealth*," and had an immense circulation in America and England. At

the sale of the Ingraham library in Philadelphia, an original *Poor Richard's Almanac*, sold for fifty-two dollars.—*Notes and Queries.*

A spiritual unity binds together every member of the human family, and every heart contains an incorruptible seed, capable of springing up, and producing all that man can know of God, and duty and the soul.

An inward voice uncreated by schools, independent of refinement, opens to the unlettered mind, not less than to the polished scholar, a sure pathway into the enfranchisements of immortal truth.—*Bancroft*

THE VALUE OF TIME.

The Chancellor D'Aguesseau, finding that his wife always kept him waiting a quarter of an hour after the dinner bell had rung, resolved to devote the time to writing a book on jurisprudence,

and putting the project in execution, in the course of time produced a work in four quarto volumes.

John Salkeld, a minister of Chester, Pennsylvania, in his travels, attended a meeting, during the silence of which, he felt an impression to make a sudden noise by rapping with his cane; and immediately after delivered this short laconic testimony:—"Resist the devil this once, and he will not trouble thee again." After meeting, some elderly Friends appeared tried with his conduct, and spoke to him on the occasion of such a strange, if not disorderly procedure. He answered them by saying, that if ever he had known the Divine Commission to preach the gospel, he thought what he had done and said that day was in obedience to his Master's requiring, and there he must leave it.

A year after he met a man, who

recalled the circumstance, and told him that being in a desponding state and contemplating suicide, he attended that meeting with the rope in his pocket.

The sudden rap and accompanying remark attracting his attention, he had resisted the temptation and was delivered from such a dreadful state of mind.—*Friends' Miscellany.*

As the setting sun that throws its parting beams on some dark cloud, imprints an iris there; so does religion—pure, heartfelt religion, illuminate the gloomiest hours of adversity; and amidst the storm that seems ready to overwhelm our bark, cheers and animates the mind, with the refulgent bow of promise.—*Lydia Nichols' Reflections.*

Religion in the heart leads into civility, teaching men and women to be mild and courteous

in their behavior.—*Wm. Penn's letter to his wife.*

"The Spirit people live in, is more to be observed, than what they profess."—*John Woolman.*

ABEL THOMAS.

It is said that on occasion of attending Yearly Meeting, Abel concluded to take with him a drove of cattle to sell in Baltimore, during the intervals of the meeting. But his attention being thus divided between meeting and market, he could neither enjoy the former, nor profit by the latter. His cattle remained on his hands and on expense during the meeting, and he declared he would never again attempt to accomplish two such different objects at the same time.—*Friends' Miscellany.*

"Little things are little things but to be faithful in little things is something great."—*Augustine.*

Christianity is neither a table of ethics, nor a system of opinions, nor a bundle of rods to punish, nor an exhibition of rewards to allure, nor a scheme of restraints to terrify, nor merely a code of laws to restrict; but it is a *new principle* infused into the heart by the Word or Spirit of God, out of which principle will inevitibly grow *right opinions, renewed affections, correct morals, pure desires, heavenly tempers*, and *holy habits*, with an invariable desire of pleasing God, and a constant fear of offending Him. *Hannah More.*

How transient friend, is human bliss below;
How false and fickle, every mortal trust!
Or dash'd with care, or veiled in deeper woe,
The thorn, our pillow—and our bed, the dust.

Life's a probationary state, at best,
To form the spirit for a purer air;
On Earth's bleak coast, we at our peril, rest,
And clouds eclipse the fairest prospects here.

Selected from Fidelia.

THE TIDES.

BY N. RICHARDSON.

In about every 25 hours there are two tides. The time of high water, as given in the Almanac, are to be understood as the mean of the morning and evening tides; thus if high water in the morning should be 15 minutes before 4 o'clock, and that of the afternoon should be at 15 minutes after 4 o'clock, the time given in the table for high water would be just 4 o'clock.

A tide is a periodical upheaval of the waters of the Ocean, and is indeed an immense wave of slight comparative elevation, but of many hundred miles in width, moving from east to west at a speed of one thousand miles per hour. There are two such waves existing at the same time, but they are on opposite sides of the earth's surface—each of these waves performing a complete revolution around the globe in about 25 hours. This phenomenon is

MOON'S PHASES.

not witnessed in the lakes, however large; nor in the closed seas, as the Mediterranean, but only in the ocean, which though bearing in its different parts a variety of names, as the Atlantic, the Pacific, the Indian, &c., is in reality one continuous body of water encircling the globe; thus rendering it possible for such a wave to continue its round and round indefinitely, or so long as the original impulse may continue to operate. Intervening islands, projecting headlands and continents, may and do produce modifications of a local character in the tides, but the great wave moves onward in obedience to the force which occasions it, and completes its revolution with such unerring certainty and punctuality, as to form a subject for calculation in Almanacs published in different countries of the globe.

This wonderful phenomenon is undoubtedly caused by the

Moon; for the periods of the tides at any place accord with the periodic passage of that satellite over the meridian thereof; and the force of her attraction is demonstrably sufficient to produce such a result. But as the greatest heat of the day and year is not when the sun is nearest vertical in our latitude, but some time after, so "high water" does not occur until some time after the passage of the moon.

The attraction of the earth and the moon for each other, is reciprocal, and when we consider that this attraction is sufficiently powerful to retain the moon in her orbit, we shall have some conception of the greatness of its force. This force acts upon the solid portion of the earth as one mass of matter; but upon a fluid, such as water, its attraction is greatest upon that portion which is nearest to it; hence the rise of the tide on the side of the

earth nearest the moon is readily accounted for.

Now as regards the intermediate tide, or the tide on the side of the earth most remote from the moon. We must take into consideration that the globe is supported in its place by a combination of forces and attractions by which it is as free to be moved as a ball floating in water. But these forces are so wonderfully adjusted and counterpoised as to produce the result which we see. This, however, does not exclude some irregularities which are constantly recurring, and as constantly being restored. Such an effect is produced by the presence of the moon on one side of the earth causing the earth to deviate somewhat from the line which it would take if there was no such disturbing power existing.

Here again, there is a difference in the effect produced upon the solid earth, and upon water,

the former must be affected as one mass, while the latter is free to obey any local influence that may be brought to bear upon it. Thus the waters of the ocean on that side of the earth most remote from the moon, are less attracted than is the earth itself, they are consequently less drawn aside, and there is thus produced a tidal wave on that side of the earth, which like the former, makes the circuit of the globe in about 25 hours.

The great end of all government is, to support power in reverence to the people, and to secure people from the abuse of power.

Any government is free to the people under it, where the laws rule, and the people are a party to those laws; and more than this, is tyranny, oligarchy and confusion.—*William Penn.*

YEARLY MEETINGS OF FRIENDS IN THE UNITED STATES.

Philadelphia, 2d-day after second 1st-day in 5th mo., 10 o'cloc

New York, 2d-day after fourth 1st-day in 5th mo., 10 o'clock.
